### 1. Executive Summary

#### 1.1 Project Overview

To develop the System to analyze the log data (In XML format) of government progress of various development activities.

#### 1.2 Purpose and Scope of this Specification

The purpose of this project is to capture the data for analyzing the progress of various activities.

#### In scope

The following requirement will be addressed in phase 1 of Project:

- Developing system to handle the incoming log feed and store the information in Hadoop Cluster (Flume)
- Analyze the data and understand the progress
- Store the results in Hbase/RDBMS

#### Out of scope

We can use this data and visualization and get more insights

## 2. Product/Service Description

#### 2.1 Assumptions

Log will be generated in XML format and stored in a server

#### 2.2 Constraints

Describe any item that will constrain the design options, including

- This system may not be used for searching for now. But it will be used for analysis and saving the relevant information as of now
- System will be using Hbase as a database

## 3. Requirements

- The FLUME job which will format the data and place the data to HDFS
- Pig/MapReduce job for parsing the XML data.
- Create Pig scripts/MapReduce jobs to analyze the data
- Create the Sqoop job to store the data in database

#### **Priority Definitions**

The following definitions are intended as a guideline to prioritize requirements.

- Priority 1 Create FLUME job for fetching log files from spool directory the data
- Priority 2 MapReduce/pig job to preprocess

## Download the dataset using the below link:

#### Link:

https://drive.google.com/file/d/0Bxr27gVaXO5sUjd2RWFQS3hQQUE/view?usp=sharing

Refer the below steps to understand the actual steps to create the above project.

## Step 1:

Copy dataset from local file system to HDFS using flume.

Note: use the conf file by downloading from below link.

**Click here** to download

#### Command:

flume-agent agent -n agent1 -c conf -f <path to filecopy.conf>

## Step 2:

Input file is in the XML format use Map reduce or pig to parse the data and get the results for the below problem statements.

#### 4. Problem statement

1. Find out the districts who achieved 100 percent objective in BPL cards

Export the results to mysql using sqoop

2. Write a Pig UDF to filter the districts which have reached 80% of objectives of BPL cards.

Export the results to MySQL using Sqoop.
